LAB 1
Podcast Guest Scheduling & Outline Builder

NAME: RUHIKA KOLLA
SRN: PES2UG24CS908
CLASS: G CSE

REQUIREMENTS TABLE:

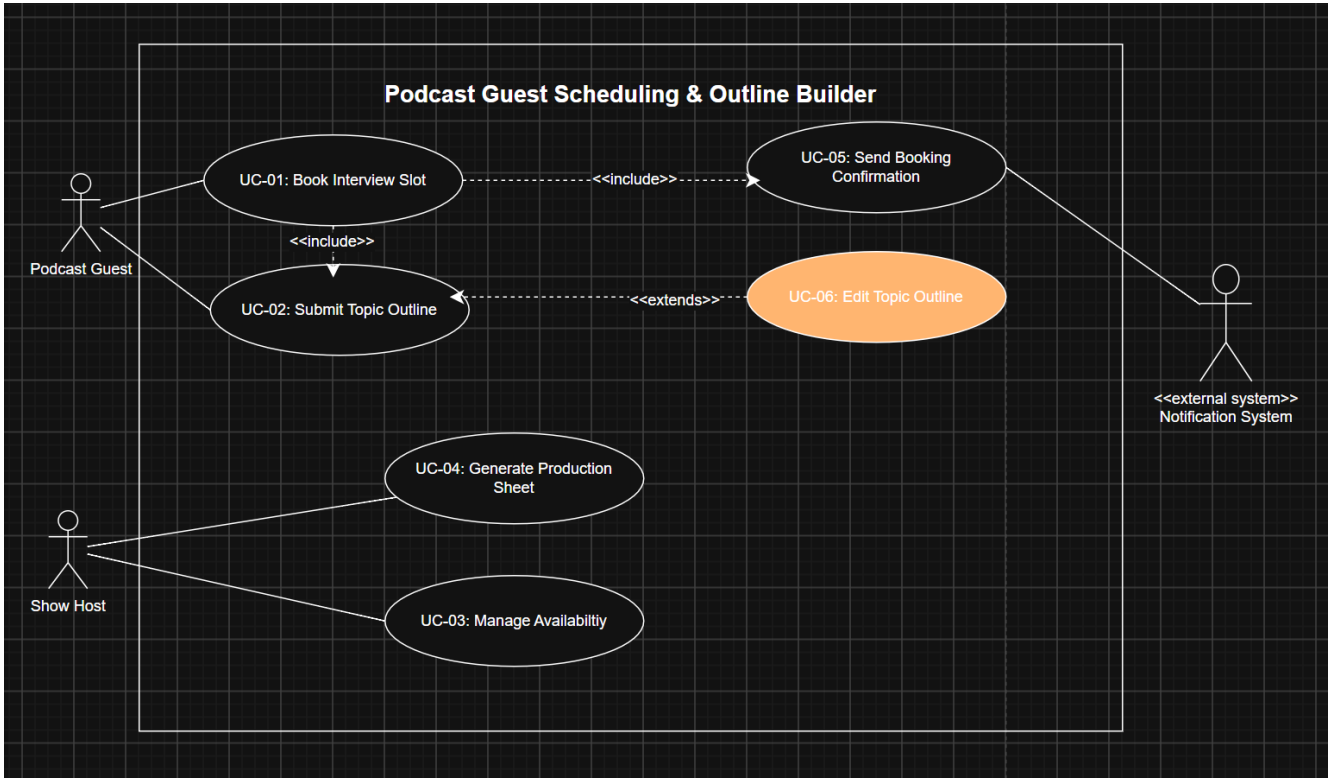

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale	Comments
FR-001	Functional	The system shall allow guests to select interview time slots and submit structured bullet points for discussion topics with biography links.	High	Pass: Slot booked, calendar invite sent, and topic outline attached to episode board. Fail: Booking permitted on blocked dates.	Core function enabling the guest-facing scheduling and outline-collection workflow.	
FR-002	Functional	The system shall allow the show host to define and publish available interview time slots, including marking specific dates as blocked/unavailable.	High	Pass: Dates marked blocked by the host do not appear as selectable slots to guests. Fail: A guest is able to select or book a host-blocked date.	Gives the host control of their own calendar and prevents double-booking or scheduling conflicts.	
FR-003	Functional	The system shall allow a guest to edit and resubmit their topic outline up until 24 hours before their scheduled interview time.	Medium	Pass: An outline edit submitted more than 24 hours before the interview start time is saved and reflected on the episode board. Fail: An edit submitted less than 24 hours before the interview is accepted.	Guests often refine talking points after initial booking; a cutoff protects host prep time.	
FR-004	Functional	The system shall automatically compile the guest's biography link, topic outline, and confirmed interview time into a timestamped run-of-show production sheet once the outline is submitted.	High	Pass: Generated production sheet contains the correct guest bio link, all submitted topic bullets, and correct slot timestamp, matching the source submission. Fail: The sheet omits any submitted section or shows an incorrect time.	Automates the host's manual prep work, which is the central value proposition of the tool.	
FR-005	Functional	The system shall send a calendar confirmation email to both the guest and the host immediately after a slot is successfully booked, including a reschedule/cancellation link.	Medium	Pass: Both parties receive a calendar invite with a working reschedule link within 2 minutes of booking confirmation. Fail: Either party does not receive the invite, or the reschedule link is broken.	Keeps guest and host synchronized on the booking and reduces missed interviews.	

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale	Comments
NFR-001	Nonfunctional [Performance & Security]	The show outline generator must compile submitted guest topics into a formatted PDF production sheet in under 1 second.	High	Pass: Benchmarking tests confirm target latency and security standards under simulated peak load.	Hosts often generate the sheet minutes before recording; slow generation would disrupt production.	
NFR-002	Nonfunctional [Usability]	The system shall allow a first-time guest with no existing account to complete slot booking and topic outline submission in no more than 3 steps/screens.	Medium	Pass: Usability testing confirms an average first-time guest completes booking and outline submission within 3 screens. Fail: The process requires more than 3 screens to complete.	Guests are typically one-time users unfamiliar with the platform; minimizing friction increases completion rate.	

Use-Case Flow Specification

Use Case ID / Name	UC-01: Book Interview Slot
Primary Actor	Podcast Guest
Secondary Actors	Show Host, Notification System
Includes	UC-02 Submit Topic Outline, UC-05 Send Booking Confirmation
Trigger	Guest opens the host's public booking link to schedule a podcast interview.

USE CASE DIAGRAM

Preconditions
1. The Show Host has published at least one open, unblocked interview time slot (see UC-03 Manage Availability).
2. The Podcast Guest has access to the host's booking link and a valid email address.
3. The guest has their biography link and initial discussion topics ready to enter.

Postconditions (Success Guarantee)
1. The selected slot is marked booked and removed from other guests' availability.
2. The guest's topic outline and biography link are attached to the episode board.
3. Both guest and host have received a calendar invite with a reschedule/cancellation link.
4. A timestamped run-of-show production sheet is available to the host (UC-04).

Main Success Scenario
1. Guest opens the booking page and views the list of open interview time slots published by the Show Host.
2. Guest selects an available time slot.
3. System validates that the slot is still open and not on a host-blocked date.
4. System prompts the guest to enter their name, email, biography link, and structured bullet-point discussion topics (UC-02, «include»).
5. Guest submits the topic outline.
6. System validates that all required fields (name, email, at least one topic bullet) are complete.
7. System marks the slot as booked and attaches the guest's topic outline to the episode board.
8. System sends a calendar confirmation email with a reschedule/cancellation link to both the guest and the host (UC-05, «include»).
9. System displays a booking confirmation screen to the guest with the interview date, time, and host contact details.
10. Use case ends successfully.

Alternate Flow — 3a. Selected Slot No Longer Available
- 3a1. System detects that another guest booked the same slot moments earlier, or the host blocked the date after the page loaded.
- 3a2. System displays a "slot no longer available" message and refreshes the list of open slots.
- 3a3. Guest selects a different available slot and the flow resumes at step 3.

Alternate Flow — 6a. Incomplete Submission
- 6a1. System detects a missing required field (e.g., no email, or zero topic bullets submitted).
- 6a2. System highlights the missing field(s) and displays an inline validation message.
- 6a3. Guest completes the missing field(s) and resubmits; the flow resumes at step 6.
- 6a4. If the guest abandons the form without resubmitting, the slot is held for 10 minutes and then released back to the open pool; the use case ends without booking.
